Digital type

D2RF series

Fiber amplifiers featuring dual outputs, dual displays, and dual sensitivity correction functions

- Enables detection for any application
- Water resistant types (IP66) and models with analog outputs are also available
- Adapts to usage environments with its numerous functions

Selection table

Type	Shape	Input/output	Light source	Degree of protection	Model (Models in parentheses are connector types)	
					NPN type	PNP type
Inter-connection master		Control output: Dual output (CH1 & CH2*)	Red 4 element LED	IP50	**D2RF-TMN** (**D2RF-TMCN4**)	**D2RF-TMP** (**D2RF-TMCP4**)
Inter-connection slave					**D2RF-TSN** (**D2RF-TSCN4**)	**D2RF-TSP** (**D2RF-TSCP4**)
Stand-alone type					**D2RF-TN** (**D2RF-TCN4**)	**D2RF-TP** (**D2RF-TCP4**)
Stand-alone type Equipped with analog output		Control output: Single output Analog output: 4 to 20 mA			**D2RF-TAN**	**D2RF-TAP**
Water resistant stand-alone type		Control output: Dual output (CH1 & CH2*)		IP66	**D2RF-2TN** (**D2RF-2TCN4**)	**D2RF-2TP** (**D2RF-2TCP4**)
Water resistant stand-alone type Equipped with analog output		Control output: Single output Analog output: 4 to 20 mA			**D2RF-2TAN**	**D2RF-2TAP**

*CH2 can be switched to control output (CH2), alarm output, teach input, or counter reset input.
● For the connector type, please purchase an optional JCN series connector cable.

Options/Accessories

Connector cables

Straight

JCN-S
Cable length: 2 m
JCN-5S
Cable length: 5 m
JCN-10S
Cable length: 10 m

L-shaped

JCN-L
Cable length: 2 m
JCN-5L
Cable length: 5 m
JCN-10L
Cable length: 10 m

End plate

BEF-EB01-W190
(2 pieces)

Reflective sheet

Diamond grade sheet
100 × 100 mm (adhesive type)

Reflector heat resistant to 300°C

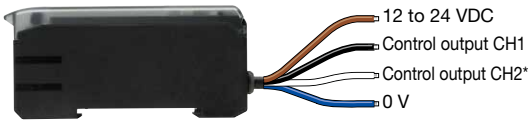
SW50
ø80 × 20 mm (ø50 mm reflective surface)

Dual outputs, displays and sensitivity correction functions

Dual output

Features 2 control outputs as standard. For each output channel, you can set Light ON/Dark ON, timer and threshold independently. Also, a dual output type with a control output and analog output (4 to 20 mA) is available. (Analog output type is stand-alone type only)

Control output ×2CH type

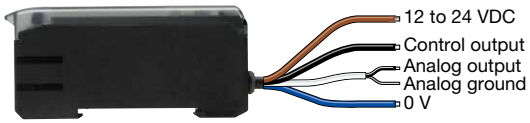


*Control output CH2 can be set to one of the following functions.

If using as an output line
○Control output CH2
○Alarm output (attenuations in the receiving light quantity are output in advance)

If using as an input line
○Teach input
○Counter reset input (when using counter function)

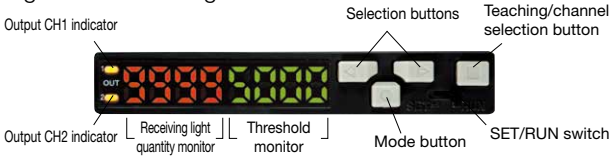
Control output + analog output type



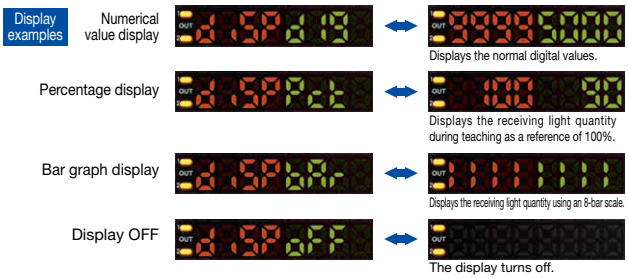
○The receiving light quantity indicator of the type equipped with an analog output displays from 0 to 4000.
○Although scaling (span adjusting) is possible, inversion and shifting are not supported.

0 to 9999 dual digital display (0 to 4000 when in Fast response time mode and in the case of analog output equipped types)

Current receiving light quantity and threshold are shown using dual displays. Fine sensitivity adjustments can easily be made after teaching. Also, through the adoption of a high brightness LED, numerical values can be confirmed at a glance even in bright worksites.



Display examples

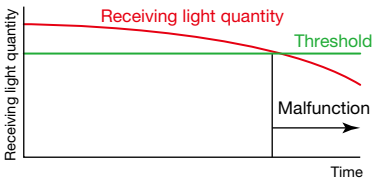


An industry first! Dual sensitivity correction function "ASC" (Automatic sensitivity correction/restoration)

*When using transparent object teaching

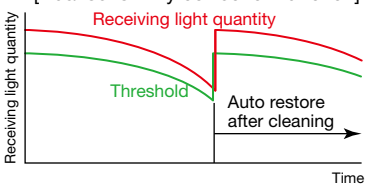
This function works to maintain optimal sensitivity levels over long periods of time by automatically performing sensitivity corrections when light level decreases occur due to contamination of fiber tips caused by dust, etc. Because threshold levels will be automatically restored after cleaning, re-teaching is not necessary. (ASC can be switched ON/OFF)

[Conventional sensitivity fixed type]



Optical system becomes dirty, resulting in decreased threshold values and malfunction. Also, teaching is necessary again after cleaning.

[Dual sensitivity correction function]



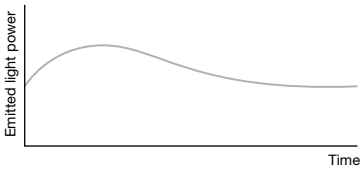
Monitors the receiving light quantity and automatically corrects the threshold value when decreases are confirmed. Also, after cleaning the optical system, threshold values are automatically restored to the optimal value.

Dual support for difficult detection conditions

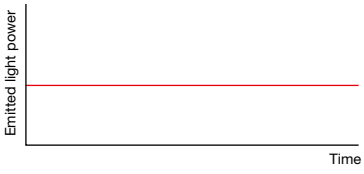
Automatic power control "APC" + 4 element red LED light source

The D2RF employs a newly developed 4 element red LED for the light source. In addition to minimizing the decreases in emitted light that occur over time, the "APC" (Automatic Power Control) automatically corrects changes in light emission levels. This function is effective when a change to the emitted light power occurs, causing instability and difficulty in performing detection. (APC can be switched ON/OFF)

[Conventional]



[APC]

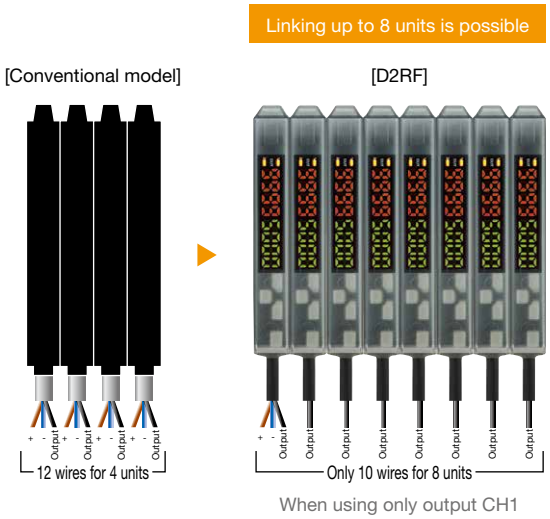


Interconnection

Up to 8 units can be connected

Wiring can be reduced

Up to 8 inter-connection type master and slave units can be linked. (cross talk prevention functionality for up to 4 units) Because only output line wiring is necessary for slave units, necessary man-hours for wiring can be cut in half.

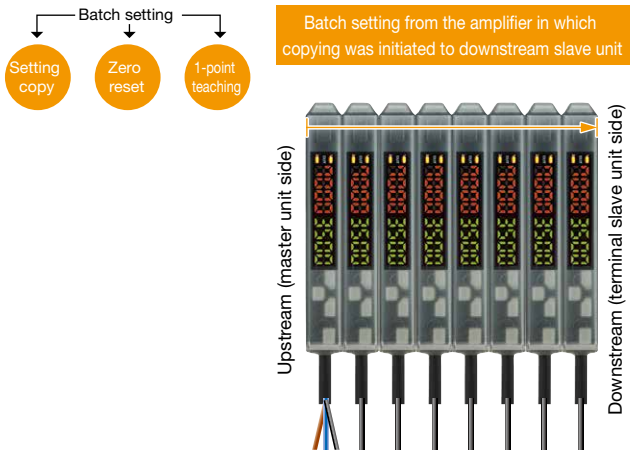


When using only output CH1

Batch setting for amplifier settings

Batch setting is possible

This function enables simultaneous setting of all linked (expanded) amplifiers. Zero reset and 1-point teaching, as well as copying of amplifier settings from upstream (master unit side) to downstream (terminal slave unit side) can be performed. Because separately sold setting tools are not required, convenience is maximized.



Settings are not applied to the amplifier in which operation was locked.

Cross talk prevention

Installing fiber cables side by side (only for Long mode and Standard mode)

By linking the master and slave units, light emission timing can be shifted electronically to prevent malfunctions caused by cross talk. (Up to 4 amplifiers)

User-friendly

External teaching is available

Teach input

By setting CH2 of the control output as the teach input, adjustments to the optimal sensitivity for multiple sensors can be made simultaneously with one teaching. This is very useful for amplifier units installed in narrow space.

*Analog output equipped types do not have a teach input.
*Teaching mode will be the mode performed in advance on the amplifier main unit (default: 1-point teaching)

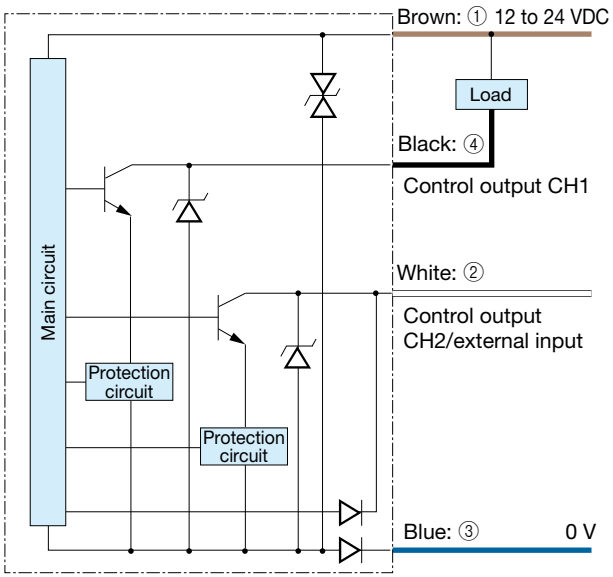
I/O circuit diagram

D2RF-2TN/D2RF-2TCN4, D2RF-TN/D2RF-TCN4, D2RF-TMN/D2RF-TMCN4, D2RF-TSN/D2RF-TSCN4

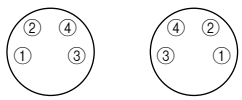
NPN output type



*The D2□F-TS□□□ slave unit does not have power supply wires (brown/blue) because power is supplied from the master unit.

Connector type

(Pin configuration) Sensor side Connector cable side



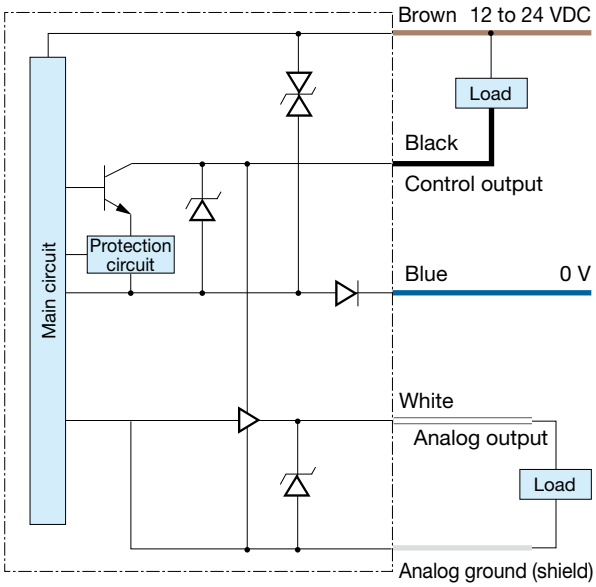
① 12 to 24 VDC
② Control output CH2/ external input
③ 0 V
④ Control output CH1

Connecting

- When not used for control output CH2 or external input, cut the lead wire and wrap it individually with insulating tape, and do not connect it to any other terminal.
- ① to ④ correspond to connector pin No.

D2RF-TAN, D2RF-2TAN

NPN output type



Notes

- When using a switching regulator for the power supply, be sure to ground the frame ground terminal.
- Because wiring sensor wires with high-voltage wires or power supply wires can result in malfunctions due to noise, which can cause damage, make sure to wire separately.
- Avoid using the transient state while the power is on (approx. 100 ms).
- The connector direction is set as in the diagram below when using the L-shaped connector cable. Be aware that rotation is not possible.
